Subject: **Review of Phase I and II Environmental Site Assessments and EDR Radius Map Report for Proposed Cupertino Residential Redevelopment at 10857, 10867, 10877 and 10887 Linda Vista Drive, Cupertino, California**

Roux Associates, Inc. (Roux) has prepared this memorandum (Memo) to summarize our review of environmental documents associated with the property located at 10857, 10867, 10877 and 10887 Linda Vista Drive, Cupertino, California (Site). The Site consists of four parcels with Assessor's Parcel Numbers (APNs) 356-06-001, -002, -003 and -004 and occupies approximately 2.54 acres. The Site is currently improved with four residential buildings. SummerHill Homes (SummerHill) plans to redevelop the Site with 51 residential townhomes.

Roux has reviewed the following documents to prepare for this Memo:

- Limited Phase II Subsurface Investigation Report, dated October 18, 2023, prepared by AEI; and,
- Phase I Environmental Site Assessment (ESA), dated January 10, 2024, prepared by AEI Consultants (AEI);
- Environmental Waste Solutions (EWS) Universal Hazardous Waste Manifest, dated May 28, 2024.
- EDR Radius Map Report, dated May 30, 2024.

### Roux's Opinion

Based on the Phase I ESA findings and Roux's review of available documents, the scope of work conducted during the Limited Phase II Subsurface Investigation appears to be adequate for the assessment of potential petroleum and agrichemical impacts. Roux concurs that no further environmental assessment is required at the Site.

We recommend the two existing underground storage tanks (USTs) and the above-ground storage tank (AST) located on the Site be removed during demolition under local Fire Department oversight. If stained soil is encountered during tank removal, the soil would be over-excavated until confirmation sampling show impacted soil is removed to the Fire Department's satisfaction. If over-excavation is not feasible due to the depth of impacts, we recommend seeking agency oversight (e.g. the San Francisco Bay Regional Water Control Board [RWQCB], the Department of Toxic Substances [DTSC], or Santa Clara County Department of Environmental Health).

More details are provided below.

### Introduction

The Site is situated on the west side of Linda Vista Drive in a primarily residential area of Cupertino, California. The Site covers approximately 3 acres of land, including an unimproved public right-of-way cul-de-sac, identified as Evulich Court, and four individual parcels. These parcels feature four one-story

single-family residential buildings, along with detached garage and shed structures, parking areas, and associated landscaping. The Site appears to be mostly flat, with surfaces consisting of vegetative cover and gravel driveways.

The property is relatively flat and is situated at an elevation of about 380 feet above sea level according to the EDR Radius Report dated May 30, 2024. The regional topography slopes toward the north/northeast, however, the direction of groundwater flow beneath the property is inferred to be to the west/northwest toward Stevens Creek, which is located approximately 600 feet to the west of the Site. Although depth to groundwater has not been directly measured at the Site, a case closure letter listed on GeoTracker for a nearby property located at 10577 San Leandro Avenue (approximately 0.5 miles northwest of the Site) states that groundwater was encountered at a depth of 25 to 30 feet below ground surface (bgs).

### Site History

- **Prior to 1939** – Unknown use
- **1939 to 1950** – The Site was used for agricultural orchards.
- **1954** – The residence at 10857 Linda Vista Drive was constructed.
- **1957** – The residence at 10867 Linda Vista Drive was constructed.
- **1968** – The residence at 10887 Linda Vista Drive was constructed.
- **1974 to Present** – The residence at 10877 Linda Vista Drive was constructed in the early 1970s.

### Building Materials

Lead-based paint (LBP) and asbestos-containing materials (ACM) are expected based on the age of buildings.

### EDR Radius Map Report

Roux reviewed the 2024 EDR Radius Map Report and compared with the 2023 EDR Radius Map Report included within the AEI 2024 Phase I ESA. As shown in the comparison results presented in Table 1, there were four additional sites identified in the 2024 EDR Radius Map Report that were not identified in the 2023 EDR Radius Map Report. However, the additional sites were not of potential environmental concern after further review of the available information.

### Phase I Environmental Site Assessment

AEI completed their Phase I Environmental Site Assessment (ESA) at the Site, in report dated January 10, 2024. No Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions, or Historical Recognized Environmental Conditions (HRECs) were identified at the Site, but several items designated as “other environmental considerations” (OECs) were listed by AEI in their findings. The OECs identified by AEI included the presence of the two USTs in the western and eastern portions of the Site, historical agricultural usage, presence of petroleum and other hazardous substance containers and drums stored onsite, and potential presence of ACMs and LBP in buildings. Further descriptions of the OECs are described below.

Two 560-gallon steel USTs containing gasoline were installed approximately between 1972 and 1982. According to environmental databases, however, the subject property may be/have been equipped with at least two and up to four 550-gallon USTs containing gasoline, though property ownership believes this may be an administrative error in the listings. The USTs were identified as an OEC.

Though not considered an OEC, it should be noted that one single-walled 300-gallon AST containing diesel remains onsite that was installed between the late 1960s and early 1970s in the northwest portion of the parcel, and was noted by AEI to be in good condition, and without staining or evidence of releases though was not contained in secondary containment.

The Site was utilized as agricultural orchards from 1939 through up to 1956. The historical agricultural usage was identified as an OEC.

The two known USTs and agricultural use history were recommended for further investigation in a Limited Phase II, which was conducted in October 2023, and did not present signs of any significant releases, as described below in the following section.

The potential presence of ACMs and LBP was noted as an OEC due to the age of the current buildings on-Site. As a result, any planned demolition of the existing structures in the future requires conducting an asbestos survey, according to the U.S. Environmental Protection Agency (EPA) National Emission Standards for Hazardous Air Pollutants (NESHAP), and that handling and disposal of LBP during potential demolition activities should be performed according to Occupational Safety and Health Association (OSHA) and Code of Federal Regulation (CFR) requirements.

During the Site reconnaissance conducted by AEI on January 5, 2024, numerous hazardous substance containers and storage drums were observed. There was no visible evidence of spills or releases, however, AEI recommended that the containers and drums be removed from the Site to prevent the possibility of a release in the future. A manifest dated May 28, 2024, documents that Environmental Waste Solutions, Inc. (EWS) off-hauled five 55-gallon drums containing diesel fuel mixed with water, along with one 55-gallon drum and one 85-gallon drum containing road oil from the Site from a generator of one of the property owners, Roy Evulich. These drums are being disposed of at EWS's designated facility in Parker South, Arizona.

### **Limited Phase II Subsurface Investigation**

AEI conducted a geophysical survey at the Site to confirm the location of two known USTs and associated piping and assess the potential presence of two additional suspected USTs on September 14, 2023. A third-party surveying subcontractor, Foresite Engineering Surveys, used ground penetrating radar (GPR) and reflective induction (RI), the survey confirmed the locations of two existing USTs in the specified areas. The depth of the top of the USTs, appears to be between 3 and 4 feet bgs. No additional USTs were found. Additionally, anomalies inconsistent with potential USTs were detected near the garage located at the eastern portion of the Site at a depth of up to 8 feet below ground surface (bgs) (likely wood and concrete debris), and west of the residence at 10877 Linda Vista Drive at a depth of up to 2.5 feet bgs (likely cement debris).

AEI conducted a subsurface investigation by advancing eleven soil borings to evaluate whether onsite soils are impacted by the environmental conditions identified in the 2024 Phase I ESA, including the presence of historical USTs and historical agricultural use. Eleven exploratory soil borings (SB-1 through SB-11) were completed using a truck-mounted direct push drilling rig on September 19, 2023. The depths varied: SB-1 and SB-2 near the UST in the western portion of the Site and SB-3 and SB-4 near the eastern UST were advanced to 12 feet bgs to assess vertical impacts beneath the anticipated depth of the USTs and were sampled at depths between 4 and 12 feet bgs for volatile organic compounds (VOCs) and total petroleum hydrocarbons (TPH) analysis. SB-5 through SB-11 were advanced to a depth of 4 feet bgs to assess the potential impacts across the Subject Property from historical agricultural usage and were sampled first encountered native soil (beneath fill) at a depth of 1.5 bgs and additionally at 4 feet bgs for organochlorine pesticide (OCP) and metals analysis.

Results from the four borings near the two confirmed USTs (SB-1 through SB-4) indicated that there were no significant impacts to the subsurface soil detected near the USTs. TPH as gasoline (TPH-g) and VOCs, including benzene, toluene, ethylbenzene, and xylenes (BTEX) were not detected at any of the four UST boring locations. TPH as diesel (-d) was detected at six feet bgs at SB-1 at a maximum concentration of 12.3 milligrams per kilogram (mg/kg) and 12 feet bgs at SB-4 at a maximum concentration of 5.53 mg/kg. TPH as motor oil (-mo) was also detected at six feet bgs at SB-3 at a concentration of 7.12 mg/kg and was not detected above reporting limits at 12 feet bgs. All compounds detected near the USTs were below their respective Tier I environmental screening levels (ESLs) and, as a result, AEI determined that there was no indication of significant releases from either of the USTs on-Site.

Shallow soil samples were collected from borings SB-5 through SB-11 and were analyzed for OCPs and metals from samples collected at 1.5 feet bgs. Based on the results, samples collected at 4 feet bgs were not analyzed. Arsenic was detected in all seven shallow soil samples, with a maximum concentration of 3.55 mg/kg at 1.5 feet bgs from SB-6, remains below the generally accepted background soil concentration of 11 mg/kg for arsenic. Lead was also detected in all seven samples, detected at a maximum concentration of 10.5 mg/kg at 1.5 feet bgs at SB-8, which remains below the Tier I ESL of 32 mg/kg and well below the Residential Direct Exposure ESL of 80 mg/kg. OCP compounds p,p-DDE and p,p-DDT were detected in three samples, with maximum concentrations of 0.0278 mg/kg and 0.0107 mg/kg respectively, well below the Residential Direct Exposure ESL values of 1.8 mg/kg and 1.9 mg/kg. Additionally, OCP compounds p,p-DDD and dieldrin were detected at 1.5 feet bgs at SB-10, though concentrations of 0.00240 and 0.00129 mg/kg remain well below the Residential Direct Exposure ESLs of 1.8 mg/kg and 0.037 mg/kg, respectively. No other OCPs were detected in the analyzed soil samples.

### **Review Summary**

Based on the results of the Phase I and Phase II investigations, AEI recommended that both inactive USTs on-Site be abandoned and removed, but that no additional investigations were warranted for the Site. Upon review of existing documentation, Roux generally agrees with all conclusions and recommendations.

Roux notes that the unidentified hazardous waste containers listed as an “other environmental consideration” (OEC) by AEI in their January 2024 Phase I ESA are likely no longer a concern, due to their removal on May 28, 2024, and the lack of evidence indicating a prior release.

Roux also notes the general inconsistency of the gasoline USTs, the diesel AST, and the hazardous waste generation with the current residential use. We did not identify any documentation for former industrial operations at the Site.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### *Lists of state- and tribal hazardous waste facilities*

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

An online review and analysis by ROUX ASSOCIATES INC of the ENVIROSTOR list, as provided by EDR, has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

An online review and analysis by ROUX ASSOCIATES INC of the RCRA NonGen / NLR list, as provided by EDR, has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Completed Document Type: Preliminary Endangerment Assessment Report  
Completed Date: 11/10/2009  
Comments:

Soil samples were collected from within the footprint of a proposed play area and analyzed for organochlorine pesticides and metals because of the possible historical use of a nearby parcel for agricultural use. There were some exceedances of human health risk-based screening levels for lead and toxaphene. In M approximately 72 cubic yards of soil was excavated to address the locations where there were exceedances of screening levels and the excavated soil was disposed at a permitted, off-site Class II landfill. The Soil Removal Completion Report presents the results of soil sampling and documents the soil removal. DTSC issued a no further action letter to the City of Cupertino based on the information presented in the Report and determined that the proposed play area has been made suitable for unrestricted use.

## STANDARD ENVIRONMENTAL RECORDS

### *Lists of Federal NPL (Superfund) sites*

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

#### ***Local Brownfield lists***

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

### EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. ### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

### PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

### PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

### PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).
